

Protect IBM FileNet P8 with CYA SmartRecovery Now: How to Get Started

CYA SmartRecovery™ is the only solution available ensuring the integrity and hot, granular recoverability of information stored within IBM FileNet P8. Follow these steps to get up and running with **CYA SmartRecovery** as soon as possible:

- 1 Determine requirements**
 - Is all or only part of the information considered critical?
 - Have you determined SLA's with respect to RTO's and RPO's?
 - How many repositories do you want to protect? Often, companies will opt to deploy **CYA SmartRecovery** on a departmental basis.
 - Are you implementing Records Management within P8?
- 2 Obtain buy in from necessary parties**
 - Business group
 - Storage group
 - Database group
 - Content management group
- 3 Place your order**
 - Licensing costs are based on the number of servers/CPUs associated with an ECM implementation and start at \$35k. Please contact your salesperson for additional information.
 - What is the configuration of your P8 environment (how many CPUs/how many repositories)?
 - Contact your salesperson.
- 4 Schedule your implementation**
 - Your salesperson will contact you to schedule your **CYA SmartRecovery** implementation.
- 5 Deploy CYA SmartRecovery**
 - **CYA SmartRecovery** is an out-of-the-box solution that can be up and running in as little as three days.
 - A comprehensive **Rapid Deployment Service (RDS) program** is available that ensures a fast start-up process minimizing impact on day-to-day operations. This program includes the services of a CYA-authorized technical resource that assists you with analysis, installation, configuration, testing and the knowledge transfer necessary to deploy the software in the fastest way possible.

Questions?
Please contact your **CYA** or **IMC** salesperson.
